

Call for Papers

Environmental Occurrence, Fate, and Transport of Chemicals and Nanomaterials

Division of Environmental Chemistry
231st American Chemical Society (ACS) National Meeting
March 26-30, 2006
Atlanta, GA

Presentations are solicited that cover a broad range of issues related to the occurrence, fate, and transport of chemicals and nanomaterials in the environment. Research papers related to intra- and intercompartmental transport will be considered. Both oral and poster papers related to this topic are of interest. Sessions are being planned to address the following areas of interest:

- Environmental monitoring of parent and degradation products
- Environmental transport, fate, and distribution among water, air, sediment, and biota
- Emerging concern of fate, transport, and transformation of manufactured nanomaterials
- Modeling and prediction

To facilitate planning you may submit a tentative title at any time. Presenters are required to submit a short abstract by **November 20, 2005**, using the ACS online system (OASYS) at <http://oasys.acs.org/> and the Environmental Chemistry Division requires an Extended abstract of two or more pages that must be submitted to the organizer by **November 25, 2005**. Extended abstract instructions are posted on the Internet at <http://www.envirofacts.org>. Please send the extended abstract as an email attachment to the organizer and label the file with the ACS abstract number (from OASYS) and the first author's last name.
