

Environmental Chemistry Continuing Education Grants

The Division of Environmental Chemistry has many members that serve in technical positions within the field of environmental chemistry. Many times the employers will send those in administrative positions to meetings so that they remain current. However, those in technical positions lack the resources to go and thus remain current (and marketable) in the field. With the market becoming ever increasingly tighter, it is important that our members stay current with new technologies and regulations. The grant will be used to offset registration and/or travel for Division members who are going to a meeting or workshop for the purpose of either learning a new aspect/technique in their field, to update their skill in a particular technique or to remain current in their field.

Particulars:

- Each grant awarded will not exceed \$500.
- A member can only receive 1 grant/year.
- Course or meeting must be an organized event open to the general scientific community such as a state- or ACS-sponsored event
- Applications (one-page) will be reviewed by a committee of environmental division members for appropriateness of meeting and for value to applicant.

Requirements:

- Division of Environmental Chemistry Member
- Must be a member in good standing for at least 3 years, residing in the U.S.
- Must have an Associates or Bachelors degree, but not an advanced degree.
- May not be a student pursuing a degree.
- Must be employed in the field of environmental chemistry full-time.
- Must have support from their employer to attend the meeting/workshop, such as time off.
- Must submit documentation showing attendance within 30 days after the meeting/workshop.

Applications may be sent via:
