

MEMORANDUM

June 4, 2008

To: Chair, ENVR Division

From: Bob Hauserman, ACS Publications Division

RE: Publications Division / ENVR Division Royalty Agreement

The ACS Publications Division and the ACS ENVR Division (Environmental Chemistry) have agreed that the ACS Publications Division will publish in electronic form on the Internet the compilation entitled *ENVR Proceedings* (hereinafter referred to as the "Work"), within their online publication entitled ACS Division Proceedings Online.

The ACS shall retain copyright to the Work.

In compliance with United States Copyright Law, ACS Publications Division shall publish past volumes of the Proceedings in the exact order in which they were originally published. The selection and arrangement of articles will remain identical with the original. Future volumes will be published in accordance with instructions from ENVR.

The ACS Publications Division shall take all precautions and steps which may be necessary to effect copyright protection, and the Internet home page for the Work shall bear the following line of copyright notice:

"Compilation Copyright © YEAR American Chemical Society. Rights to individual papers remain with the author(s). Thus, permission of the original author is required for reproduction of material appearing in these volumes. The *Proceedings* should be cited as the origin of the material."

Individual preprints published within the compilation shall bear the following line of copyright notice:

"In most instances, authors retain copyright to preprints. U.S. Government-authored works are not subject to U.S. copyright. Crown Copyright may apply to works submitted by authors employed by the governments of Australia, Canada, or the U.K. ACS advises checking with the relevant authors to confirm copyright status of individual preprints."

The ACS will pay ENVR a royalty fee of 20% of the net revenue for each subscription sold. Consistent with industry standards, ACS will remit the royalty payment every six month within two (2) months of the close of the royalty calculation period, to wit: August 31 for period ending June 30 and February 28 for the period ending December 31.

Please contact me with any questions.
